RAFF-R

BAFFR;TNFRSF13C;BAFF-R;BROMIX;CD268;CVID4;prolixin Synonyme

Host Species Rabbit

Anti-BAFF-R antibody(DM127); Rabbit mAb Description Delivery In Stock

Uniprot ID Q96RJ3 IgG type Rabbit IgG Clonality Monoclonal Reactivity Human Application Flow Cyt Recommende Dilutions Flow Cyt 1:100

Purification Purified from cell culture supernatant by affinity chromatography

Formulation & Reconstitution Lyophilized from sterile PBS, pH 7.4. Normally 5 % – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution.

Storage & Shipping

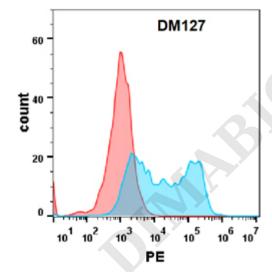

specific instructions of reconstitution.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at amblient temperature.

Be cell-activating factor (BAFF) enhances B-cell survival in vitor and is a regulator of the peripheral B-cell population. Overexpression of Baff in mice results in mature B-cell hyperplasia and symptoms of systemic lupus erythematosus (SLE). Also, some SLE patients have increased levels of BAFF in serum. Therefore; it has been proposed that abnormally high levels of BAFF may contribute to the pathogenesis of imministration of the survival of autoreactive B cells. The protein encoded by this gene is a receptor for BAFF and is a type III transmembrane protein containing a single extracellular cysteline-rich domain. It is thought that this receptor is the principal receptor required for BAFF-mediated mature B-cell survival Research use only Background

Usage

**Figure 1.** Flow cytometry analysis with Anti-BAFF-R **(DM127)** on HEK293 cells transfected with human BAFF-R (Blue histogram) or HEK293 transfected with irrelevant protein(Red histogram).
