CD3E CD3e;T3E Synonyme Host Species Rabbit

Biotinylated Anti-CD3E antibody(1G2), IgG1 Chimeric mAb Description

Delivery 2-3 weeks Uniprot ID P07766

lgG type Rabbit/Human Fc chimeric IgG1

Clonality Monoclonal Reactivity Human Application Flow Cyt Recommended Dilutions Flow Cyt 1/100

Purification Purified from cell culture supernatant by affinity chromatography

Lyophilized from sterile PBS, pH 7.4. Normally 5 % – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution. Formulation & Reconstitution

Storage & Shipping

specific instructions of reconstitution.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.

Freezing and thawing). Lyophilized proteins are shipped at ambient temperature.

Freezing and thawing). Lyophilized proteins are shipped at ambient temperature.

Freezing and thawing). Lyophilized proteins are shipped at ambient temperature.

Freezing and a second and a second and the T-cell receptor close and gamma deleta and zeta, and the T-cell receptor alpha/beta and gamma/delta heterodines. Forms the T-cell receptor CD3 complex. This complex plays an important role in coupling and tipen recognition to several intracellular signal-transduction pathways. The genese encoding the epsilon, gamma and delta polypetides are located in the same cluster on chromosome 11. The epsilon polypetide plays an essential role in T-cell development. Defects in this gene cause immunodeficiency. This gene has also been linked to a susceptibility to type I diabetes in women. [provided by RefSeq., Jul 2008] Background
