This gene encodes a 6-protein coupled receptor 1 family member involved in the complement system of the innate immune response. Unlike classical from the complement is the protein of the complement in the innate immune response. Unlike classical the beta-arrestin pathway; and may alternatively act as a decoy receptor. This gene may be involved in coronary artery disease and in the pathogenesis of sepsis, alternative splicing results in multiple transcript variants. [provided by Refec; Nov 2012]. Background
