This gene encodes a member of the common anamor chain family of cytokines with immunoregulatory activity. The encoded protein plays a role in both the innate and adaptive immune responses by inducing the differentiation, proliferation and activity of multiple target cells including macrophages, natural killer cells. B cells and cytotoxic T cells, Dysregulation of this gene plays a role in multiple immune-mediated diseases including lupus, sporiasis and chronic inflammatory diseases. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene. [provided by Refseq, Dec 2011]
