

PRODUCT INFORMATION

MET **Target**

DA11; HGFR; AUTS9; RCCP2; c-Met; DFNB97 **Synonyms**

Recombinant Cynomolgus MET protein with C-Description

terminal 10×His tag

Delivery In Stock

Uniprot ID XP_005550635

Expression Host HEK293

Tag C-10×His tag

Molecular

Molecular Weight

Reconstitution

MET(Glu44-Gly952) 10×His tag Characterization

The protein has a predicted molecular mass of 103.1 kDa after removal of the signal peptide. The apparent molecular mass of cMET-His is approximately 100-130 kDa due to glycosylation.

The purity of the protein is greater than 85% as determined by SDS-PAGE and Coomassie blue Purity

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % Formulation &

 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

This gene encodes a member of the receptor tyrosine kinase family of proteins and the product of the proto-oncogene MET. The encoded

preproprotein is proteolytically processed to generate alpha and beta subunits that are linked via disulfide bonds to form the mature receptor. Further processing of the beta subunit results in the formation of the M10 peptide, which has been

Background

shown to reduce lung fibrosis. Binding of its ligand, hepatocyte growth factor, induces dimerization and activation of the receptor, which plays a role in celular survival, embryogenesis, and cellular migration and invasion. Mutations in this gene are associated with papillary renal cell carcinoma, hepatocellular carcinoma, and various head and neck cancers. Amplification and
