Human C3AR full length protein-synthetic nanodisc

Description Delivery 6~8weeks Uniprot ID 016581 HEK293 Expression Host

Protein Families GPCR,Transmembrane,Druggable Genome GPCRDB Class A Rhodopsin-like,Peptide GPCRs, Protein Pathways

Molecular Weight The human full length C3AR protein has a MW of 53.9kDa Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution. Formulation & Reconstitution

lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution. Store at -20°C to -80°C for 12 nombte in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.

Cal is an anaphyllatoxin released during activation of the complement system. The protein encoded by this gene is an orphan G protein-coupled receptor for Cas. Binding of Cas by the encoded receptor activates chemotaxis, granule enzyme release, superoxide anion production, and bacterial opsonization. [provided by RefSeq. May 2016]
