Human CEACAM5(496-592) Protein, hFc Tag Cat. No. PME101575

PRODUCT INFORMATION

SynonymsCEA; CD66eDescriptionRecombinant human CEACAM5(496-592) Protein with C-terminal human Fc tagDeliveryIn StockUniprot IDP06731Expression HostHEK293TagC-Human Fc tagMolecular CharacterizationCEACAM5(Val496-Gly592) hFc(Glu99-Ala330)Molecular WeightThe protein has a predicted molecular mass of 36.7 kDa after removal of the signal peptide. The apparent molecular mass of CEACAM5(496-592)- hFc is approximately 35-70 kDa due to glycosylation.PurityStorage & ShippingStorage & ShippingLyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% created from sterile pBS, pH 7.4. Normally 5 % - 8% created from sterile pBS, pH 7.4. Normally 5 % - 8% created from sterile pBS, pH 7.4. Descriptionwith C-terminal human Fc tagDeliveryIn StockUniprot IDP06731Expression HostHEK293TagC-Human Fc tagMolecular CharacterizationCEACAM5(Val496-Gly592) hFc(Glu99-Ala330)Molecular CharacterizationCEACAM5(Val496-Gly592) hFc(Glu99-Ala330)Molecular WeightThe protein has a predicted molecular mass of 36,7 kDa after removal of the signal peptide. The apparent molecular mass of CEACAM5(496-592)- hFc is approximately 35-70 kDa due to glycosylation.PurityThe purity of the protein is greater than 95% as determined by SD-PAGE and Coomassie blue staining.Formulation & ReconstitutionLyophilized form sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilized form After reconstitution. Storage & ShippingStorage & ShippingStore at -20°C to -80°C for 12 months in Lyophilized proteins are shipped at ambient temperature. This gene encodes a cell surface glycoprotein that represents the founding member of the carcinoembryonic antigen (CEA) family of proteins. The encoded protein is used as a clinical biomarker for gastrointestinal cancers and may protein may regulate differentiation, apoptosis, and cell polarity. This gene eluster on chromosome 19. Alternative splicing results in multiple transcript variants. [provided by RefSeq., Jul 2015]UsageResearch use only	Synonyms	CEA; CD66e
Uniprot IDP06731Expression HostHEK293TagC-Human Fc tagMolecular CharacterizationCEACAM5(Val496-Gly592) hFc(Glu99-Ala330)The protein has a predicted molecular mass of 36.7 KDa after removal of the signal peptide. The apparent molecular mass of CEACAMS(496-592)- hFc is approximately 35-70 kDa due to glycosylation.PurityDescription The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue staining. Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before hyophilization. Please see Certificate of Analysis for specific instructions of reconstitution. Storage & ShippingStorage & ShippingThis gene encodes a cell surface glycoprotein that represents the founding member of the carcinoembryonic antigen (CEA) family of proteins. The encoded protein is used as a clinical biomarker for gastrointestinal cancers and may promote tumor development through its role as a cell adhesion molecule. Additionally, the encoded protein may regulate differentiation, apoptosis, and cell polarity. This gene is present in a CEA family gene cluster on chromosome 19. Alternative splicing results in multiple transcript variants. [provided by RefSeq. Jul 2015]UsageResearch use only	Description	
Expression HostHEK293TagC-Human Fc tagMolecular CharacterizationCEACAM5(Val496-Gly592) hFc(Glu99-Ala330)Molecular CharacterizationThe protein has a predicted molecular mass of 36.7 kDa after removal of the signal peptide. The apparent molecular mass of CEACAM5(496-592)- hFc is approximately 35-70 kDa due to glycosylation.PurityThe purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue staining. Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized form as cell surface glycoprotein that represents the founding member of the carcinoembryonic antigen (CEA) family of proteins. The encoded protein is used as a calinical biomarker for gastrointestinal cancers and may promote tumor development through its role as a cell adhesion molecule. Additionally, the encoded protein is used as a clinical biomarker for gastrointestinal cancers and may promote tumor development through its role as a cell adhesion molecule. Additionally, the encoded protein may regulate differentiation, apoptosis, and cell polarity. This gene is present in a CEA family gene cluster on chromosome 19. Atternative splicing results in multiple transcript variants. [provided by RefSeq, Jul 2015]UsageResearch use only	Delivery	In Stock
