

PRODUCT INFORMATION

OPRK Target

KOP; KOR; KOR1; OPRK1; KOR-1; K-OR-1 **Synonyms** Recombinant human OPRK Protein with C-Description

terminal human Fc tag

Delivery In Stock **Uniprot ID** P41145 **Expression Host** HFK293

Tag C-Human Fc tag

Molecular

Reconstitution

Background

OPRK(Met1-Ala57) hFc(Glu99-Ala330) Characterization

The protein has a predicted molecular mass of **Molecular Weight**

32.0 kDa after removal of the signal peptide. The apparent molecular mass of OPRK-hFc is

approximately 35-55 kDa due to glycosylation.

The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue Purity

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % Formulation &

- 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

This gene encodes an opioid receptor, which is a member of the 7 transmembrane-spanning G protein-coupled receptor family. It functions as a receptor for endogenous ligands, as well as a receptor for various synthetic opioids. Ligand binding results in inhibition of adenylate cyclase activity and neurotransmitter release. This opioid receptor plays a role in the perception of pain and mediating the hypolocomotor, analgesic and

aversive actions of synthetic opioids. Variations in this gene have also been associated with alcohol dependence and opiate addiction. Alternatively spliced transcript variants encoding different isoforms have been found for this gene. A recent study provided evidence for translational readthrough in this gene, and expression of an additional C-terminally extended isoform via the
