This gene encodes a member of the ADAMTS (a disintegrin and metalloproteinase with thrombospondin motif) protein family. M share several distinct protein modules, including a propeptide region, a metalloproteinase domain, a disintegrin-like domain, an type 1 (TS) motif, individual members of this family differ in the number of C-terminal TS motifs, and some have unique C-termin encoded by this gene contains two disintegrin loops and three C-terminal TS motifs and has anti-angiogenic active. The express associated with various inflammatory processes as well as development of cancer cachexia. This gene is likely to be necessary territing, and organ morphology and function.
