This gene encodes a member of the C-type lectin.C-type lectin-like domain (CTL:CTLD) superfamily. Members of this family share a common protein fold and have diverse functions; such as cell adhesion; cell-cell signaling; glycoprotein turnover; and roles in inflammation and inmune response. The encoded protein may play a role in regulating dendritic cell function. This gene is closely linked to other CTL:CTLD superfamily members on dronesome 1:p1.5 in the natural killer gene complex region. Alternative splicing results in multiple transcript variants.
