This gene encodes a G protein-coupled receptor with selectivity for three chemokines; termed CXCL9:Mig (monokine induced by interferon-g); CXCL10:P10 (interferon-g-inducible 1 to Bb protein) and CXCL11:F1AC (interferon-inducible 7 cell achievant extends indiging of chemokines to this protein induces cellular responses that are involved in leukocyte traffic; most notably integral activation; cytoskeletal changes and chemotactic migration. Alternatively spliced transcript variants encoding different isoforms have been found for this gene. One of the isoforms (CXCR3-B) shows high affinity binding to chemokine; CXCL4:P47 (MPID: 21702116). [Provided by RefSeq; Jun 2011] Background
