Putative adhesion molecule that mediates sialic-acid dependent binding to cells. Preferentially binds to alpha-2,3- and alpha-2,6-linked sialibrids disalogangiosides (disalogalactosyl globoside; disaloy) lactotetraosylceramide and disaloy) GalNAc lactotetraosylceramide. The sialic recognition site may be masked by cis interactions with sialic acids on the same cell surface. In the immune response; may act as an inhibit upon ligand induced tyrosine phosphorylation by recruiting cytoplasmic phosphatases(s) via their FN2 domain(s) that block signal transduction dephosphorylation of signaling molecules. Mediates inhibition of natural killer cells cytotoxicity. May play a role in hemopoiesis. Inhibits diffe CD34 cell precursors towards myelomonocytic cell lineage and proliferation of leukemic myeloid cells (in vitro).[UniProttRs:Swiss-Prot Function Research use only Background
